

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A method, comprising:
generating a recipient list;
selecting one or more data mark information wherein each said data mark information indicates a time and each said data mark information represents content that is broadcasted at said time; and

transmitting said one or more data mark information to one or more recipients in said recipient list.
2. (original) The method of claim 1 wherein said recipient list includes one or more of a name of a recipient and an email address corresponding to each of said one or more names.
3. (original) The method of claim 1 wherein the selecting step includes performing a drag and drop operation.
4. (original) The method of claim 3 wherein said drag and drop operation includes selecting an icon representing said one or more data mark information;
dragging said selected icon over an application display; and
deselecting said dragged icon substantially over said application display.
5. (original) The method of claim 4 wherein said icon includes a combined graphical and text display representation.

6. (original) The method of claim 4 wherein said application display includes an electronic mail application display.
7. (original) The method of claim 4 wherein transmitting step includes initiating an application function corresponding to said application display for transmitting said one or more data mark information.
8. (original) The method of claim 1 further including storing said recipient list.
9. (original) The method of claim 1 further including modifying said recipient list.
10. (original) The method of claim 1 further including appending a message text to said one or more data mark information transmission.
11. (original) The method of claim 1 wherein said data mark information includes a playlist information corresponding to one or more bookmarked music clip broadcasts.
12. (original) The method of claim 1 wherein said transmitting step includes generating an electronic mail including said data mark information and transmitting said generated electronic mail to said one or more recipients.
13. (currently amended) A method, comprising:
 - displaying a recipient list window;
 - receiving one or more input signals corresponding to one or more entry in said recipient list;
 - displaying data mark information wherein each said data mark information indicates a time and each said data mark information represents content that is broadcasted at said time;
 - displaying an application function icon;
 - detecting a selection of the displayed data mark information and said application function icon; and
 - transmitting an electronic message including said data mark information.

14. (original) The method of claim 13 wherein said recipient list window includes one of a pop-up window display and a drop down window display.

15. (original) The method of claim 13 wherein said one or more input signals includes one or more of a name and electronic mail address pair.

16. (original) The method of claim 13 wherein said data mark information includes a playlist information corresponding to one or more bookmarked broadcast music clips.

17. (original) The method of claim 13 wherein said displaying data mark information step includes generating a combined graphical and text representation corresponding to said data mark information.

18. (original) The method of claim 13 wherein said message transmitting step includes automatically transmitting said message after said detecting step.

19. (original) The method of claim 13 wherein said message transmitting step includes:

- displaying a message window;
- detecting a transmit command; and
- transmitting said electronic message.

20. (original) The method of claim 19 wherein said data mark information in said transmitted message includes one or more playlist information each corresponding to a bookmarked music clip broadcast.

21. (original) The method of claim 13 further including storing said recipient list.

22. (original) The method of claim 13 wherein said detecting step includes detecting a drag and drop operation of said data mark information.

23. (currently amended) A method, comprising:
initiating a mail application function;
transmitting recipient information; and
inputting a command for transmitting an electronic mail
message including one or more data mark information wherein each said data
mark information indicates a time and each said data mark information
represents content that is broadcasted at said time.
24. (original) The method of claim 23 wherein said one or more data mark
information includes one or more playlist information each corresponding to a
bookmarked broadcast music clip.
25. (original) The method of claim 23 further including initiating an auto transmit
function.
26. (original) The method of claim 25 further including appending a default
message to said electronic mail message.
27. (original) The method of claim 23 wherein said recipient information
transmitting step includes revising a recipient list.
28. (original) The method of claim 27 wherein said recipient list includes one or
more of a name and an electronic mail address pairs.
29. (currently amended) A data mark sharing system, comprising:
means for generating a recipient list;
means for selecting one or more data mark information
wherein each said data mark information indicates a time and each said data
mark information represents content that is broadcasted at said time; and
means for transmitting said one or more data mark
information to one or more recipients in said recipient list.

30. (original) The system of claim 30 wherein said recipient list includes one or more of a name of a recipient and an email address corresponding to each of said one or more names.

31. (original) The system of claim 29 wherein the selecting means includes means for performing a drag and drop operation.

32. (original) The system of claim 31 wherein said means for performing said drag and drop operation includes:

means for selecting an icon representing said one or more data mark information;

means for dragging said selected icon over an application display; and
means for deselecting said dragged icon substantially over said application display.

33. (original) The system of claim 32 wherein said icon includes a combined graphical and text display representation.

34. (original) The system of claim 32 wherein said application display includes an electronic mail application display.

35. (original) The system of claim 32 wherein transmitting means includes means for initiating an application function corresponding to said application display for transmitting said one or more data mark information.

36. (original) The system of claim 29 further including means for storing said recipient list.

37. (original) The system of claim 29 further including means for modifying said recipient list.

38. (original) The system of claim 29 further including means for appending a message text to said one or more data mark information transmission.
39. (original) The system of claim 29 wherein said data mark information includes a playlist information corresponding to one or more bookmarked music clip broadcasts.
40. (original) The system of claim 29 wherein said transmitting means includes means for generating an electronic mail including said data mark information and transmitting said generated electronic mail to said one or more recipients.
41. (currently amended) A data mark information electronic mailing system, comprising:
- means for displaying a recipient list window, data mark information and an application function icon;
 - means for receiving one or more input signals corresponding to one or more entry in said recipient list;
 - means for detecting a selection of the displayed data mark information and said application function icon; and
 - means for transmitting an electronic message including said data mark information wherein each said data mark information indicates a time and each said data mark information represents content that is broadcasted at said time.
42. (original) The system of claim 41 wherein said recipient list window includes one of a pop-up window display and a drop down window display.
43. (currently amended) A data mark information sharing system, comprising:
- means for initiating an electronic mail application function;
 - means for transmitting recipient information; and
 - means for inputting a command for transmitting an electronic mail message including one or more data mark information wherein each said

data mark information indicates a time and each said data mark information represents content that is broadcasted at said time.

44. (original) The system of claim 43 wherein said one or more data mark information includes one or more playlist information each corresponding to a bookmarked broadcast music clip.
